

## BufferedReader class

Java BufferedReader class is used to read the text from a character-based input stream.

It can be used to read data line by line by `readLine()` method.

It makes the performance fast. It inherits [Reader class](#).

### Example:-

```
import java.io.BufferedReader;
import java.io.IOException;
import java.io.InputStreamReader;
public class Hemanth
{
    public static void main(String[] args) throws IOException
    {
        BufferedReader br=new BufferedReader(new InputStreamReader(System.in));
        System.out.println("Enter your name");
        String name=br.readLine();
        System.out.println("Hello "+name);
    }
}
```
